

The background of the slide is a night-time photograph of the Dubai skyline, featuring the Burj Khalifa and other skyscrapers. A network diagram with green nodes and lines is overlaid on the image, connecting various points across the skyline.

IRETP

INTEGRATED REAL ESTATE TRANSPARENCY PLATFORM

WORKING REFERENCE BUILD · ~90% RFP

TECHNICAL PROPOSAL PRESENTATION · RFP v1.3

Integrated Real Estate Transparency Platform

A unified transparency, risk & intelligence platform for Dubai's real-estate market.

Tender DLD-IRETP-2026-001 Prepared for the Dubai Land Department, Government of Dubai

[Your Company Name] · [Presenter Name, Title] · 22 June 2026

■ AGENDA

What we'll cover today

Eleven sections · roughly 30 minutes · followed by discussion

01

Dubai Land Department

Context & mandate

02

Project Summary

What IRETP is, in one view

03

Project Requirements

One platform, four audiences

04

Solution Architecture

Clean Architecture on Microsoft Fabric

05

Delivery Methodology

How we build and assure

06

Functional Requirements

What the platform does

07

The Platform — Live Screens

AI · Maps · a running product

08

Non-Functional Requirements

Performance, security, residency

09

Implementation Timeline

3 months to go-live

10

Documentation Provided

A complete knowledge pack

11

Project Deliverables

What DLD receives

Dubai Land Department

DLD registers, regulates and underwrites confidence in one of the world's most active real-estate markets. IRETP is the digital backbone for the next decade of that mandate.

Transparency

A single, trusted source of truth for the public, investors and regulators.

Oversight

Early detection of developer, project and escrow risk before it harms the market.

Investor confidence

Open data, fair indices and developer accountability — by design.

Global standing

Strengthen Dubai's position on international transparency indices (GRETl).

THE CHALLENGE IRETP SOLVES

Fragmented data, manual oversight and limited public transparency — unified into one intelligent, bilingual platform.

Fragmented data sources → One Fabric-aligned data plane

Manual risk monitoring → Automated Early-Warning Risk System

Limited public access → Open data + Arabic-first AI agent

Project Summary

IRETP is a single, bilingual, AI-enabled platform that unifies public transparency and internal regulatory oversight — and it already exists as a working reference build.

■ Two platforms, one system

An External Public Portal for investors, the public and open-data consumers, and an Internal Platform for DLD regulatory oversight — cleanly separated, one codebase.

■ AI at the core

An Arabic-first real-estate AI agent, grounded in DLD data, governed, auditable and UAE-resident — not a bolt-on chatbot.

■ Already built

~90% functional coverage demonstrated today on .NET 9 Clean Architecture, with 106 automated tests passing — 0 errors, 0 warnings.

■ Three months to production

A de-risked, gated path from this reference build to a UAT-certified, DESC-aligned, production go-live in the UAE.

WHY IT WINS

We don't ask DLD to imagine the platform.

~90%

RFP functional coverage in the build today

106

automated tests passing

100%

UAE data residency

3 mo

to a production go-live

One platform, four audiences

The RFP asks one system to serve four very different audiences at the same time. IRETP is structured around exactly these four.

Public & Investors

Price & rental indices · project search · developer scorecards · GIS heatmaps · Open Data APIs · AI agent (AR/EN)

DLD Regulatory Staff

Early-Warning Risk System · escrow monitoring · AML / beneficial ownership · immutable audit trails · regulatory reports

Developers & Partners

Partner APIs · project & registration status · escrow compliance · benchmark data · self-service developer portal

Ministry & Government

KPI dashboards · ESG indicators · macro indices · international benchmarking · GRETl sub-index tracking

NON-NEGOTIABLES

100% UAE residency

Arabic parity

DESC security

Transparency by design

SECTION 04

Solution Architecture

Clean Architecture, three independent hosts — aligned to DLD's existing Microsoft Fabric / OneLake ecosystem.

Clean Architecture, three independent hosts

IRETP.Web

Blazor Server portal — public + admin console

IRETP.WebAPI

Public & investor API · Open Data · SignalR

IRETP.AdminAPI

Internal DLD operations — policy-gated, separate host

Application CQRS use-cases via MediatR — commands, queries, validation, handlers

Domain DDD entities, rules & enums — zero framework dependencies (the canonical model)

Infrastructure EF Core 9 · Hangfire · ASP.NET Identity + OIDC · SignalR · AI orchestration

DATA PLANE

UAE North · UAE Central DR

Azure SQL

Microsoft Fabric / OneLake (Gold)

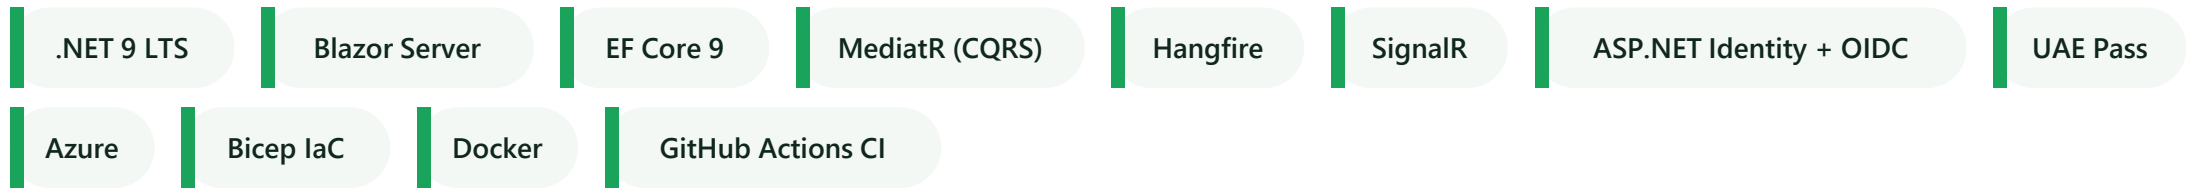

Key Vault (HSM)

GRS Storage

App Insights

Proven stack, on DLD's Microsoft Fabric ecosystem

TECHNOLOGY STACK

Microsoft Fabric / OneLake

Reads DLD's existing Gold layer through a single abstraction (IFabricGoldDataSource) — no parallel ETL, no parallel data store. (RFP v1.3 \$11.4)

Deployment

Azure UAE North (primary) + UAE Central (warm DR) · Front Door + WAF · private endpoints · P1v3 multi-instance · RPO ≤ 15 min, RTO ≤ 1 h.

Visualisation

Power BI for the Internal Platform; a custom-web layer (Chart.js + MapLibre) for the External Portal — AED 0 licensing at public scale. (RFP v1.3 \$11.4.2)

How we build — and how we assure

Engineering discipline

Clean Architecture + DDD + CQRS. A framework-agnostic core that is testable, maintainable and survives technology change.

Agile, with hard gates

Three monthly milestones with G1 / G2 / G3 acceptance gates and fortnightly DLD steering — progress you can audit.

Quality built in

106 automated tests today; unit, integration, E2E, performance, security and AI-accuracy checks run in CI on every change.

AI governance

Tiered model routing, UAE-residency metadata on every call, deterministic analytics overlay, an advisory guardrail and an EN/AR accuracy harness.

Security by design

DESC ISR v3 control mapping, OWASP, external VAPT, 24×7 SOC and an immutable audit trail — engineered from day one, not retrofitted.

Data familiarisation

A 2-week discovery sprint maps every DLD source system to the Gold-layer schema before a single number is published. (§12.1)

What the platform does — today

Every group below is **implemented in the reference build** — not roadmap, not mockup.

External Public Portal

CMS · KPI dashboard · transactions · GIS map · price & rental index
· slice-and-dice analytics

IMPLEMENTED

Real Estate AI Agent

RAG-grounded · multi-model orchestration · bilingual · guardrails ·
cross-session memory

IMPLEMENTED

Investor Tools

Watchlist · alerts (email / SMS / in-app) · saved views · personalised
scorecard PDF

IMPLEMENTED

Early-Warning Risk System

10 risk indicators · L1–L4 auto-escalation · SLA tracking · risk
heatmap · playbooks

IMPLEMENTED

Developer Rating & Escrow

8-criteria scoring · configurable weights · escrow monitoring ·
monthly health reports

IMPLEMENTED

Open Data Portal

OpenAPI 3.0 contract · tiered rate limits · self-service developer
portal & API keys

IMPLEMENTED

Transparency Plus

Beneficial ownership · mortgage analytics · ESG indicators · GRETI
sub-index tracker

IMPLEMENTED

Multilingual & RTL

Arabic-first EN/AR parity in Phase 1 · six further languages · full RTL
mirroring

IMPLEMENTED

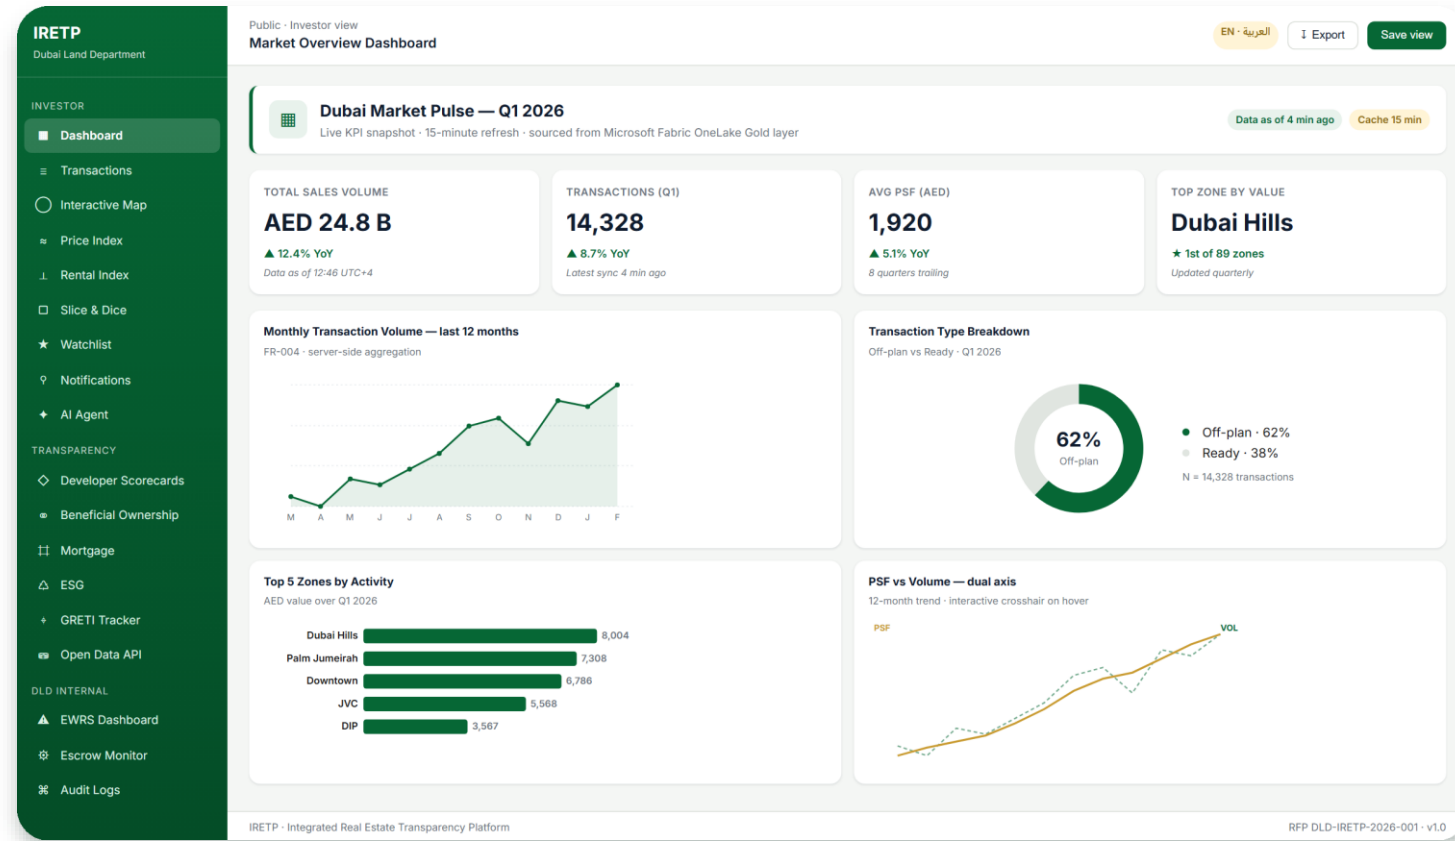

SECTION 07

The Platform — Live Screens

Not mockups. A running product — the AI agent, the maps, and the full transparency suite.

Market Pulse — the public dashboard

THE PUBLIC'S FRONT DOOR

Live KPIs, 15-minute freshness

Total volume, transactions, average PSF and top zone — sourced from the Fabric Gold layer.

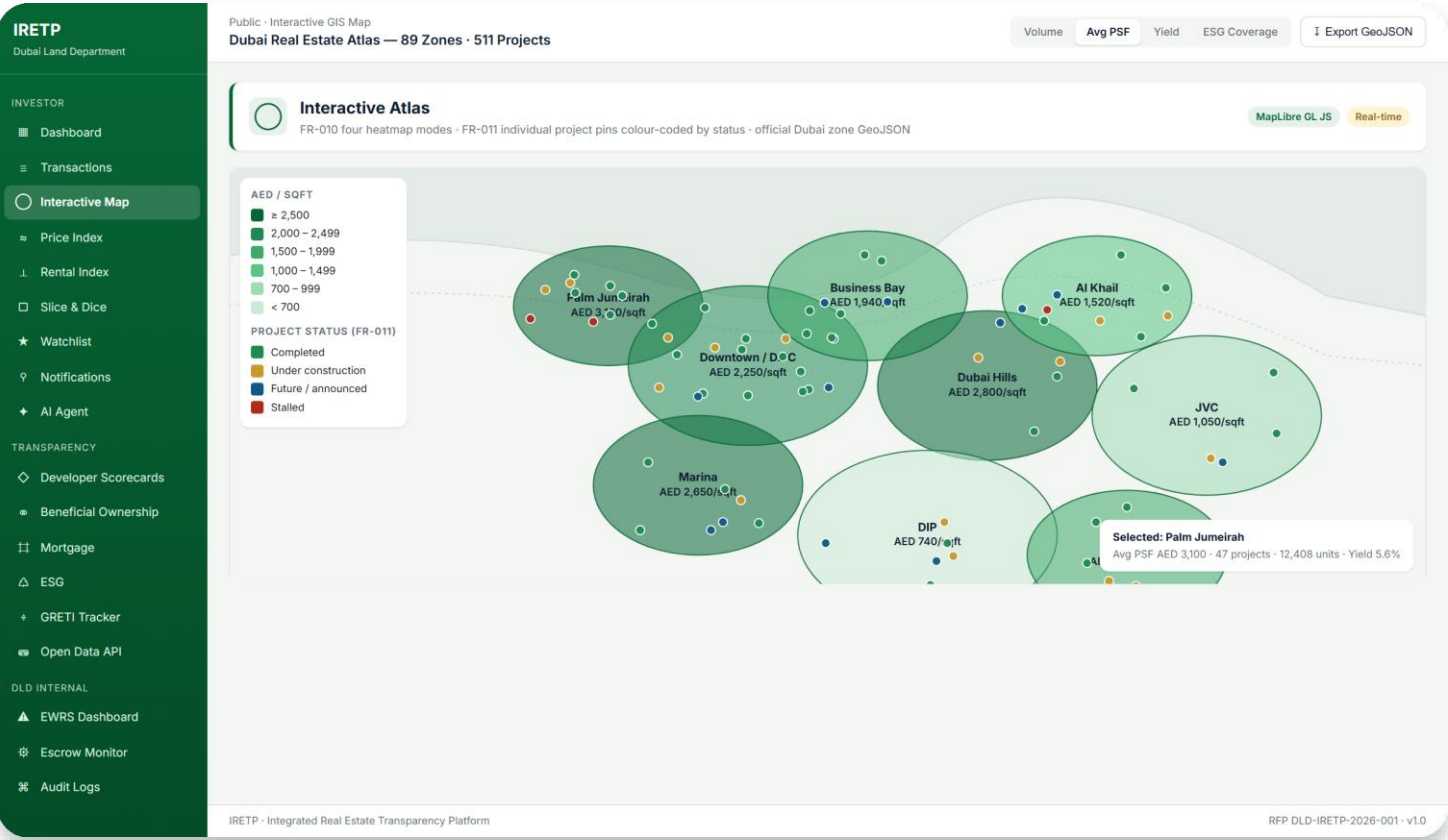

FR-004 market charts

Monthly volume, off-plan vs ready mix, top-5 zones and a price-per-sqft trend with crosshair hover.

Bilingual, branded, fast

Full EN/AR with RTL mirroring; P95 page load under 2 seconds.

Interactive GIS Atlas

HEADLINE 7 · MAPS

FR-009 — four heatmap modes

Volume, price-per-sqft, yield and ESG coverage — banded on the official Dubai zone GeoJSON.

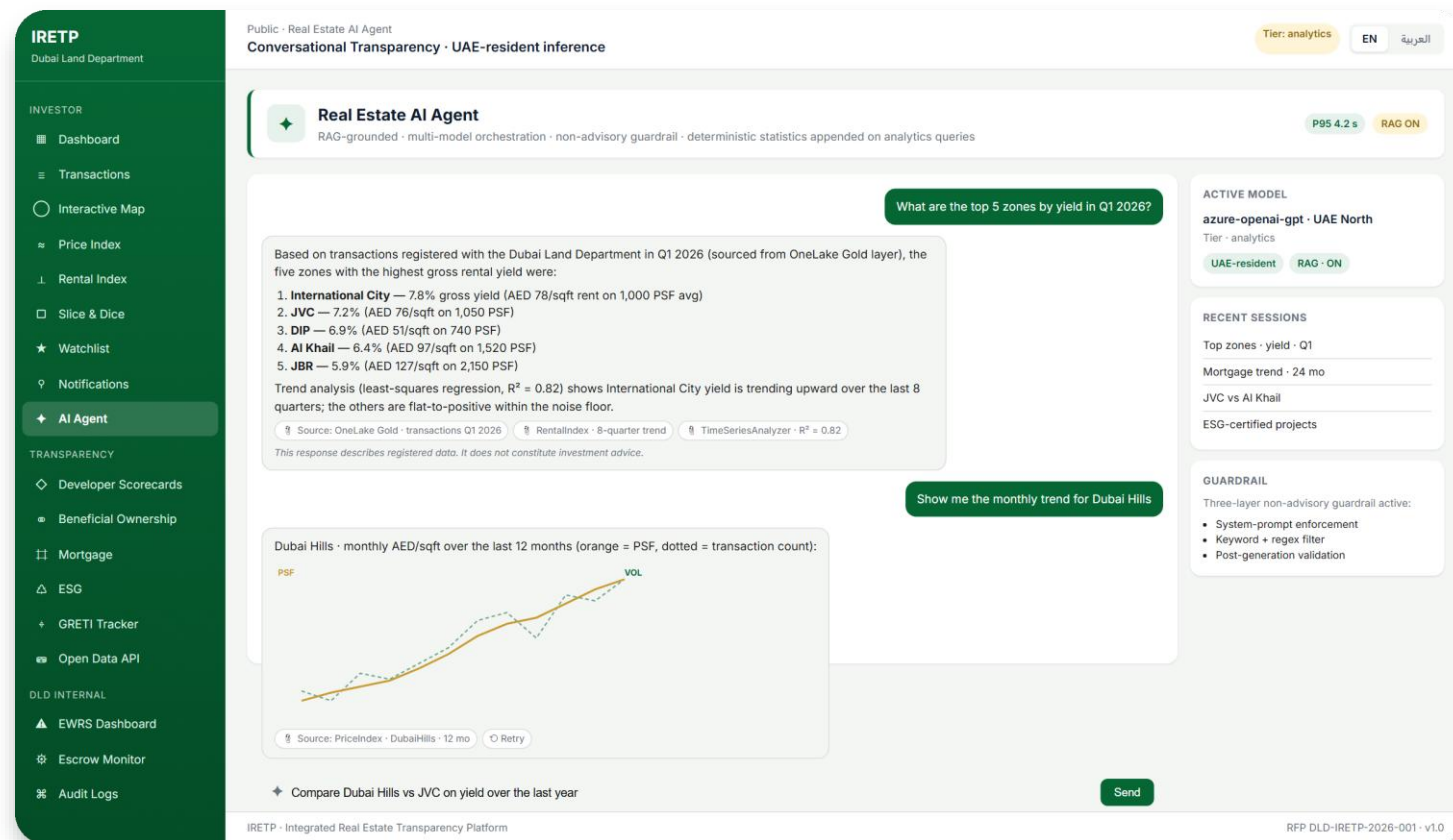

FR-011 — individual project pins

Every active project as a pin, colour-coded by status: completed, under construction, future, stalled.

Click-through detail

Select a zone for average PSF, unit count and yield; click a pin for project-level detail.

Real Estate AI Agent

HEADLINE 7 · AI

Arabic-first, RAG-grounded

Answers grounded in DLD data with source citations — every reply is traceable, not generative guesswork.

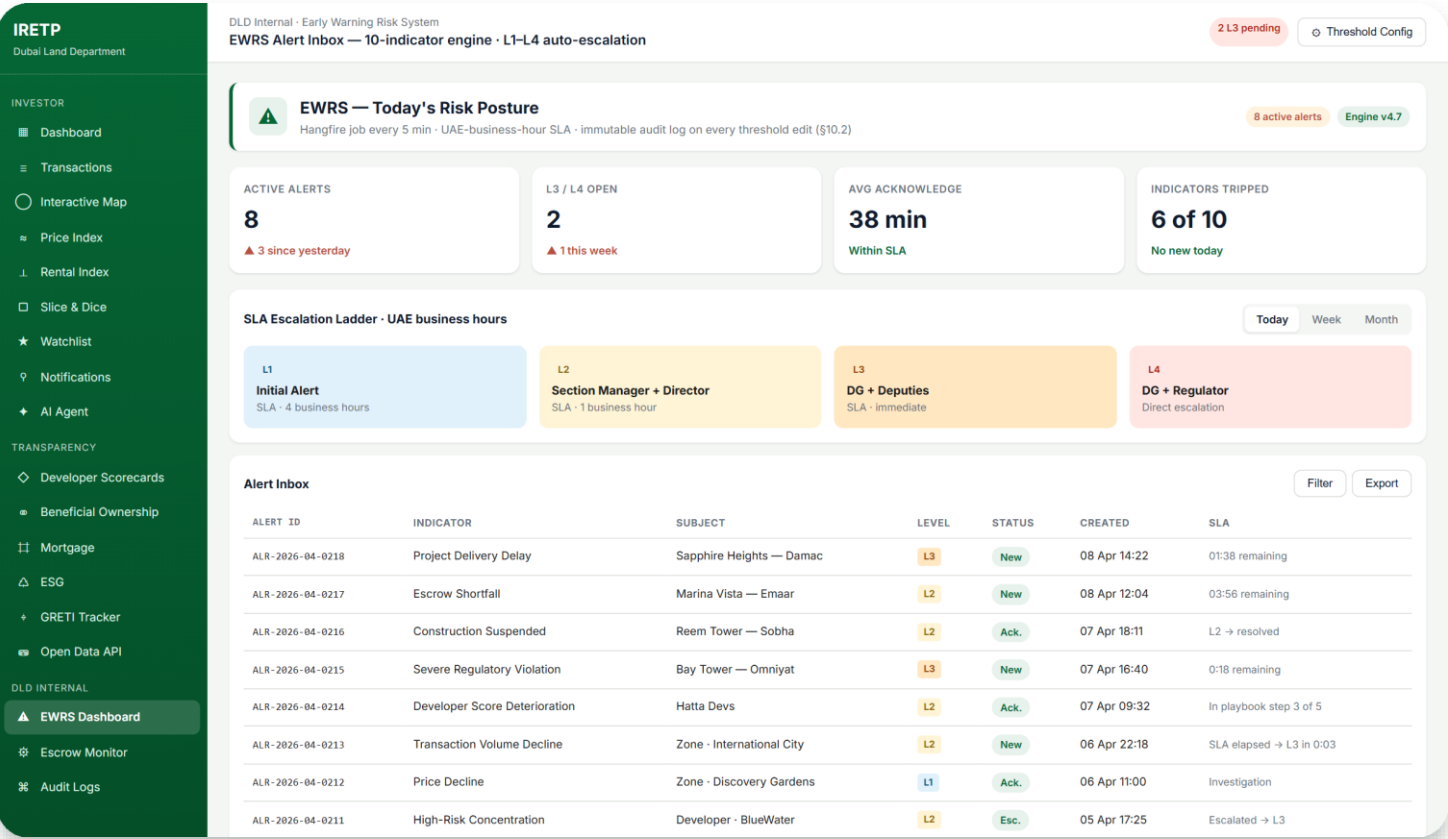

Deterministic analytics overlay

Trend, anomaly and correlation are computed in-process and quoted, so the model reports numbers it doesn't invent.

Governed by design

Non-advisory guardrail refuses investment advice; UAE-resident inference; multi-model routing with fallback.

Early-Warning Risk System

INTERNAL OVERSIGHT

10-indicator risk engine

Delivery delay, escrow shortfall, construction suspension, volume decline, developer deterioration and more.

L1–L4 auto-escalation

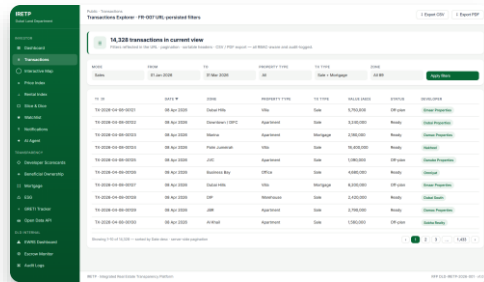

From Project Officer to DG + Regulator, on UAE business-hours SLAs, with a live escalation ladder.

Immutable audit, by law

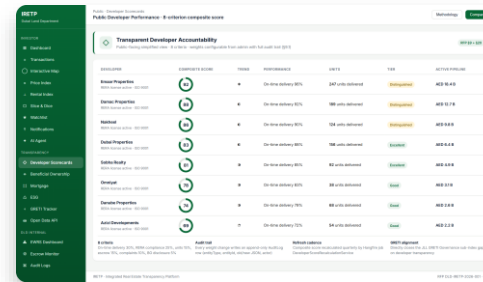

Every threshold change and acknowledgement is written to an append-only audit log (\$10.2).

... and the rest of the transparency suite

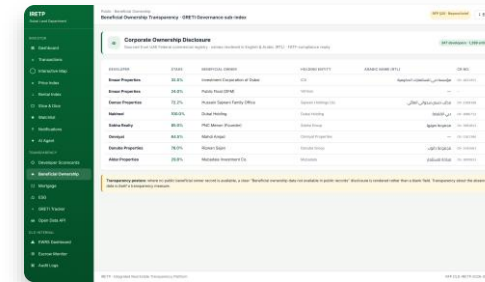

Beyond the four headline screens, the full suite is built and running.

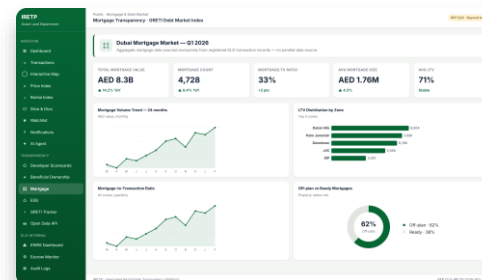

Transactions Explorer
Filter · sort · export (CSV / PDF)

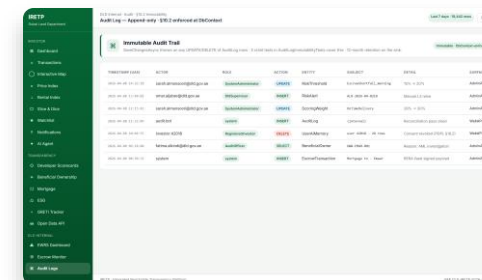

Developer Scorecards
Public, weighted, transparent

Beneficial Ownership
AML disclosure · access-audited

Mortgage Analytics
LTV, tenor & rate transparency

Immutable Audit Logs
Append-only · every action

Performance, security and trust

Performance

- P95 public page load ≤ 2.0 s
- AI agent P95 response < 3.5 s
- KPI dashboard freshness ≤ 15 min
- 99.9% public / 99.95% internal availability

Security

- MFA + RBAC policy registry
- 30-min internal JWTs, refresh rotation
- TLS 1.2+ · partner API-key tiers
- Immutable, append-only audit trail

Data residency

- 100% UAE — UAE North + UAE Central DR
- AI inference UAE-resident, or flagged
- Backups, logs & analytics in-region
- No cross-border processing without waiver

Compliance

- DESC ISR v3 control mapping
- UAE PDPL · OWASP ASVS L2
- ISO 27001 roadmap · external VAPT
- 24×7 SOC from Month 1

WEEK	W1	W2	W3	W4	W5	W6	W7	W8	W9	W10	W11	W12

A complete, living knowledge pack

Every document below already exists in the reference repository — delivered, version-controlled, and self-validating: CI tests prove the docs still match the code.

Architecture & Integration Map	Compliance Matrix (RFP → code → test)	DESC ISR v3 Control Mapping
OWASP Top 10 Mapping	STRIDE Threat Model	Risk Register
Security & Compliance Plan	UAT Plan (10 categories)	Operations Runbook
Disaster Recovery (RTO/RPO)	Data Dictionary	API Reference + OpenAPI 3.0
Data Familiarisation Pack	Knowledge Transfer & Exit Plan	Visualisation Layer Analysis

What the Dubai Land Department receives

The Platform

External Portal + Internal Platform + Open Data API — bilingual, production-deployed in the UAE.

Source & IP

Full source code, Bicep IaC and CI/CD pipelines — all intellectual property vests in DLD.

Documentation

The complete knowledge pack — architecture, compliance, security, ops, DR and data.

Assurance

UAT sign-off, VAPT report + remediation, DESC-CSP certification, performance & DR test reports.

Enablement

Super-user training, ops runbook walkthrough, developer portal, and 14-day hyper-care.

Support

12-month warranty, SLA-backed (Sev 1: 1 h response / 4 h restore), 24×7 SOC.

MILESTONES

Kickoff

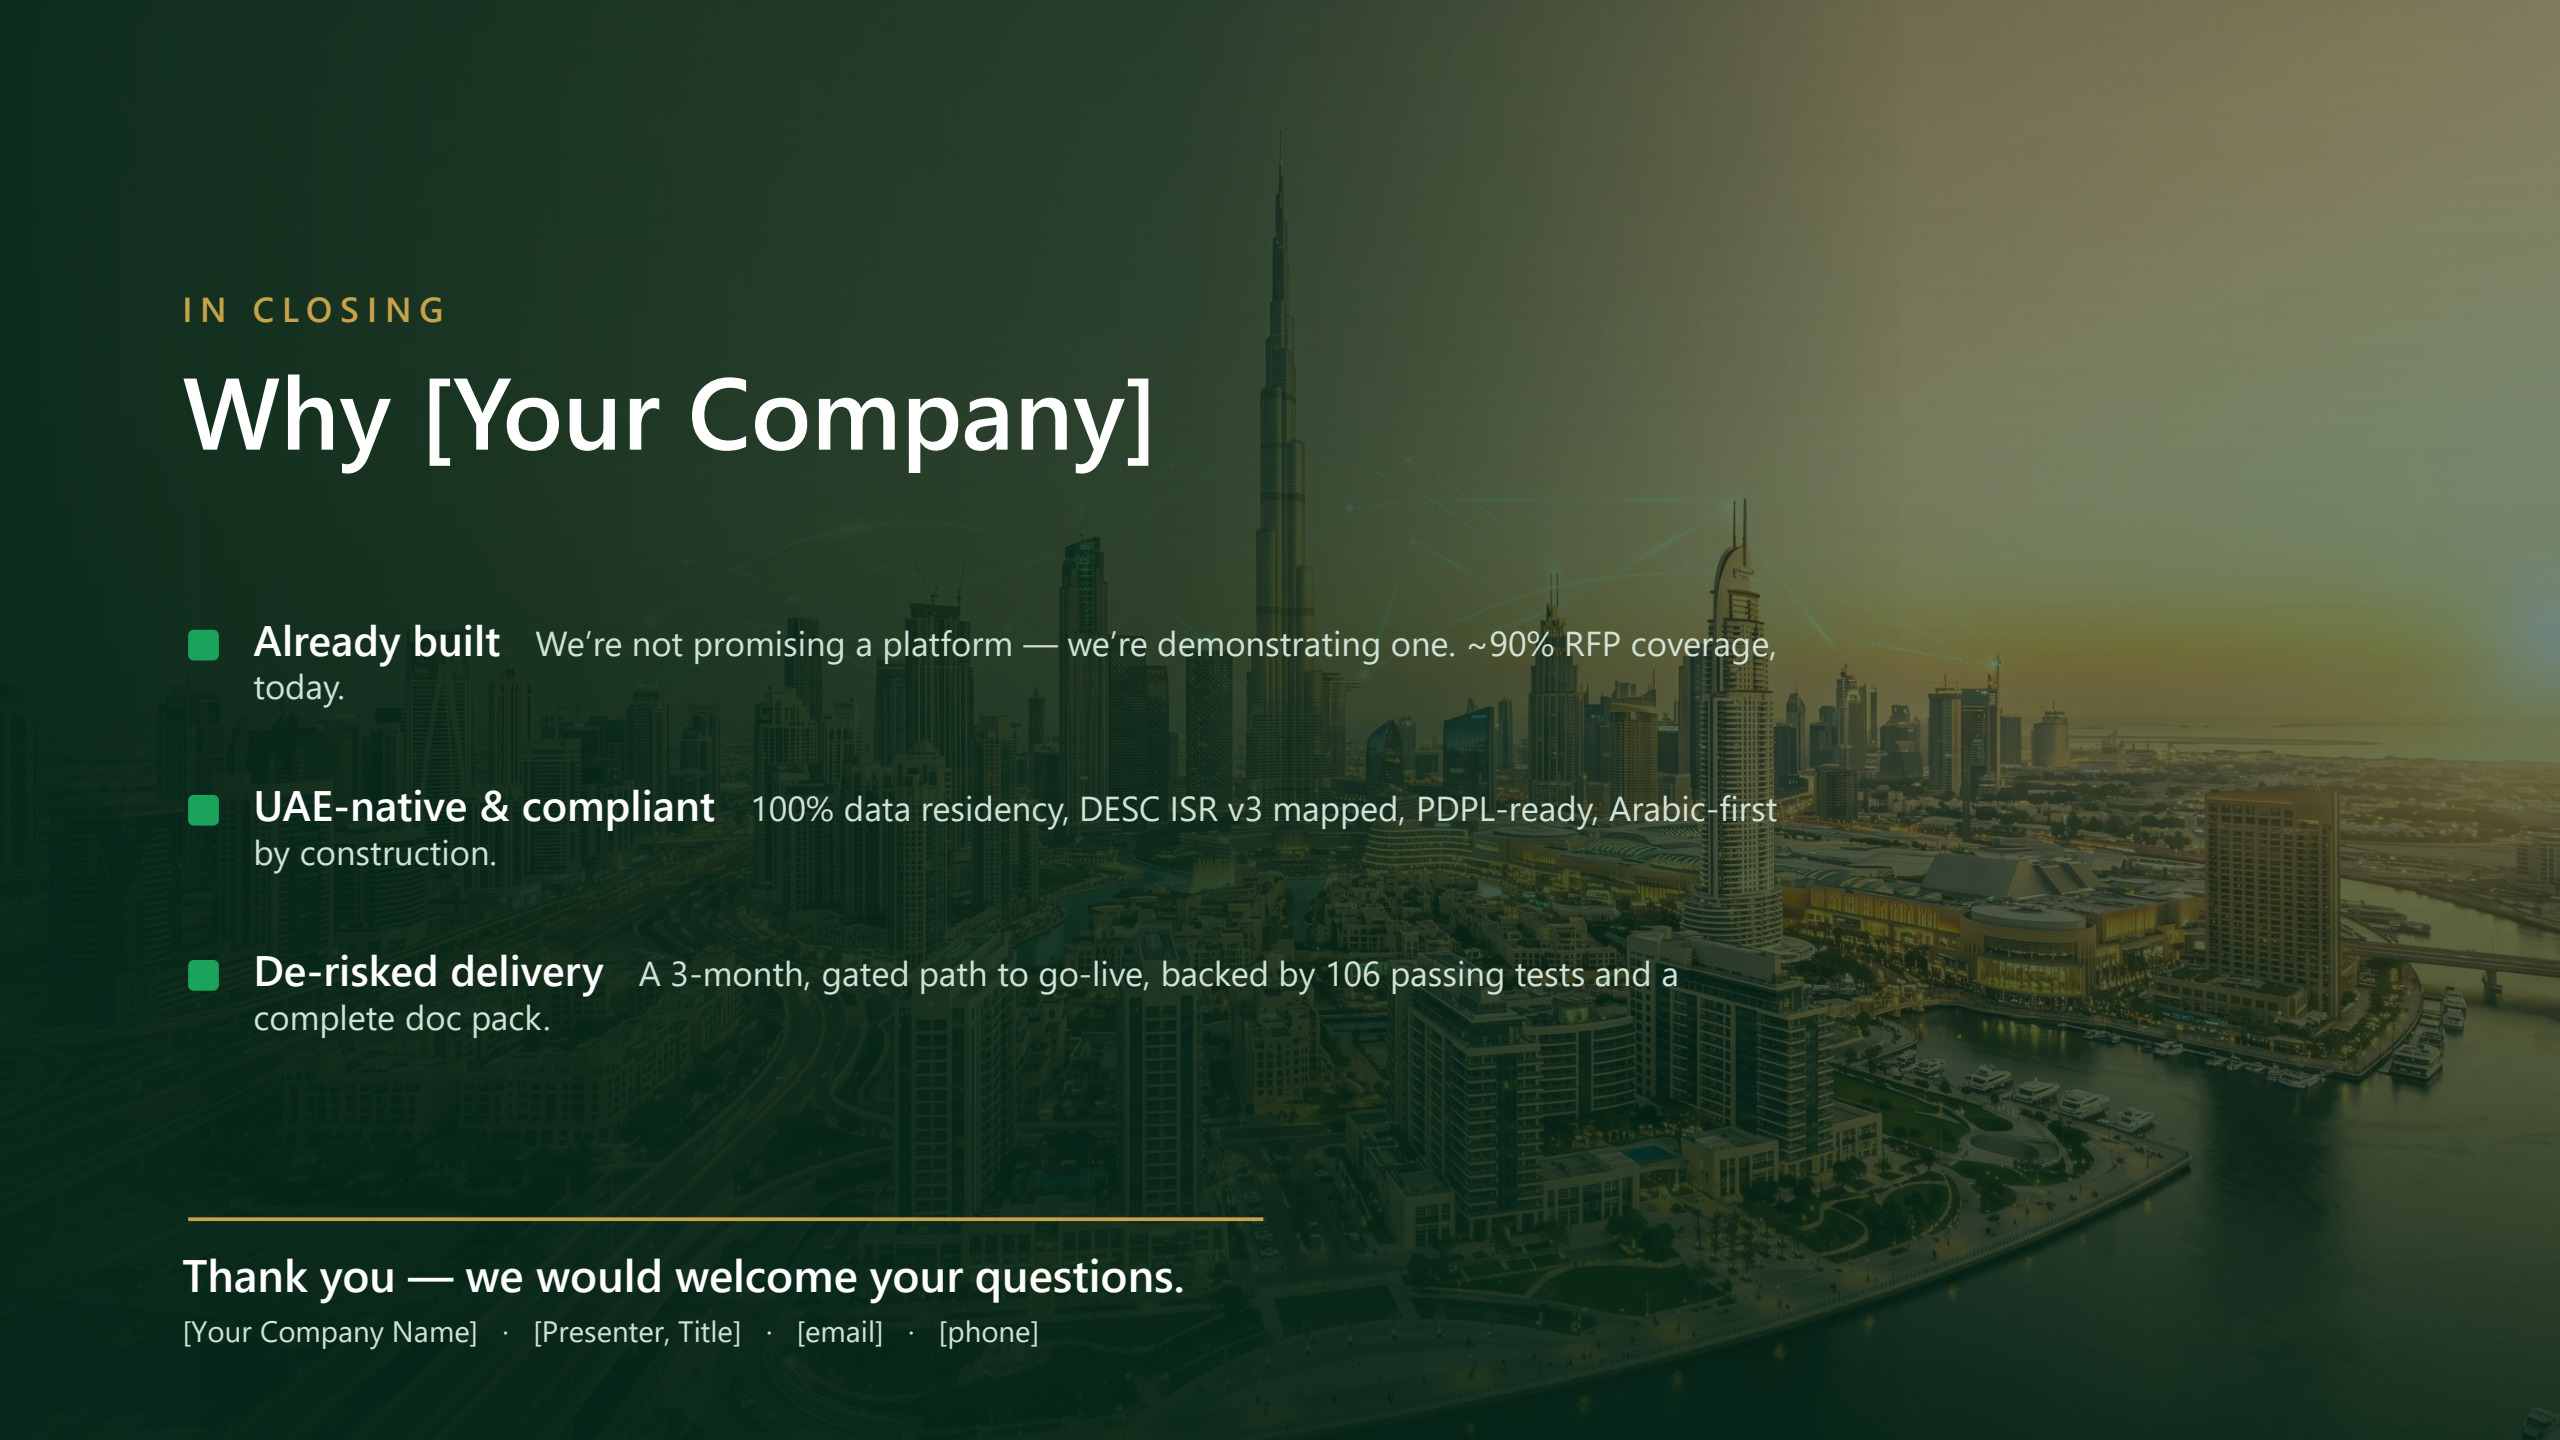

→ Gate G1

→ Gate G2

→ UAT sign-off

→ Go-Live

→ Hyper-care

An aerial view of the Dubai skyline at dusk, featuring the Burj Khalifa and other skyscrapers. A network diagram with green lines and nodes is overlaid on the image, connecting various points across the city.

IN CLOSING

Why [Your Company]

- **Already built** We're not promising a platform — we're demonstrating one. ~90% RFP coverage, today.
- **UAE-native & compliant** 100% data residency, DESC ISR v3 mapped, PDPL-ready, Arabic-first by construction.
- **De-risked delivery** A 3-month, gated path to go-live, backed by 106 passing tests and a complete doc pack.

Thank you — we would welcome your questions.
